

APFC RT Manual

Built documents — open any chapter, then print to PDF from your browser

Version	v1.0
Compiled	16 August 2026
Exam stage	Recruitment Test (RT)

ACTION · PDFS ARE BUILT AND READY

Every chapter is generated as a **print-quality A4 PDF** in the pdf/ folder, with a running header, page numbering and no page breaks through the middle of a callout, table or question block. Download those directly — that is the version to read and print.

The HTML below is the same content for reading on screen; it reflows for phone and tablet, and you can still print it from the browser (Ctrl/Cmd-P) if you prefer.

Available now

Module	Chapter	Topic	PDF	On screen	Version
6	F6.1	Accounting fundamentals — equation, double entry, books, trial balance and error types	PDF, 39 pp	HTML	v1.0
6	F6.2	Concepts, conventions, standards — and capital versus revenue	PDF, 35 pp	HTML	v1.0

Read them in order — F6.2 §5 closes a thread F6.1 §6.2 deliberately left open, and F6.2 §2 assumes the accounting equation from F6.1 §2.

Project state

The **Master Content Register** is the source of truth for what is complete and what remains. Read it first if you are resuming after a break.

- **Complete:** Modules 1, 2, 3, 5 — 44 chapters, 100 hours, 109.5 planning marks
- **Remaining:** Modules 4, 6, 7, 8, 9, 10, 11 — 124 hours, 190.5 planning marks

Study order for what remains

1. **Module 6 + 7** — Accounting, Auditing, Statistics, Insurance « in progress
2. **Module 9** — General Science & Computer Applications
3. **Module 4** — Indian Economy, Population, Development, Globalisation
4. **Module 10** — Integrated Current Affairs
5. **Module 11** — PYQ analysis, five full mocks, final revision

Module 8 (General English, Quantitative Aptitude and Reasoning) runs *daily* alongside all of the above, in the evening 30-minute slot — never as a block of its own. It is 80 planning marks, the largest single block in the paper.

Rebuilding

```
`` python3 build/build.py # src/*.md -> docs/*.html env -u NODE_OPTIONS node build/pdf.mjs # docs/*.html -> pdf/*.pdf ``
```

Sources live in `src/` as Markdown and are the master manuscript. Everything in `docs/` and `pdf/` is generated — never edit it by hand.
