

APFC RT Manual

Built documents — open any chapter as a page-numbered A4 PDF

Version	v1.0
Compiled	16 August 2026
Exam stage	Recruitment Test (RT)

ACTION · PDFS ARE BUILT AND READY

Every chapter is generated as a **print-quality A4 PDF** in the `pdf/` folder, with a running header, **"Page X of Y"** numbering, and no page breaks through the middle of a callout, table or question block. Download those directly — that is the version to read and print.

The HTML is the same content for reading on screen; it reflows for phone and tablet.

In this repository: 37 chapters, 938 pages, 1,069 practice questions, every answer key balanced across the four options and verified against its intended option text.

HIGH YIELD · THE SYLLABUS IS COMPLETE — START WITH THESE THREE

All eleven modules are written and all **300 planning marks** are covered. There is no longer any reading to be finished before you begin. Three documents matter more than the rest:

1. **F8.0 — The Daily Drill Programme** — the 12-week dated calendar. **Go to its §3, week 1, Monday, and start tomorrow evening.** Module 8 is 80 of the 300 marks and it runs as 30 minutes a day, not as a block
2. **F11.2 — Full Mock 1** — a complete 120-question paper. Sit it at week 8 under examination conditions, then complete its score analysis
3. **F11.3 — Mock Protocol and Final Revision** — how to spend the last four weeks, and what to do the morning of the paper

One warning before you rely on older notes. Four statutes have been replaced inside the last twelve months, and material written before late 2025 will teach repealed law:

Change	From	To	Effective
Rural employment guarantee	MGNREGA, 2005 — 100 days	VB-G RAM G Act, 2025 — 125 days	1 July 2026
Insurance FDI	74%	100%	5 Feb 2026
Income tax	Income-tax Act, 1961	Income-tax Act, 2025	1 April 2026
Labour law	29 central Acts	Four labour codes	21 Nov 2025

Add to those the **Employees' Pension Scheme, 2026**, which replaced EPS-95 on 29 June 2026. **This manual has been corrected for all five** — see **F10.3** for the record and the sources.

Module 8 — General English, Quantitative Aptitude & Reasoning · complete

80 planning marks — the largest single block in the paper, larger than Labour Laws. Start with **F8.0**: it is not a chapter but the **12-week calendar** that tells you which questions to attempt each evening. A module with no obvious moment to start is a module that gets postponed.

Ch	Topic	PDF	On screen	Q
F8.0	The Daily Drill Programme — the 12-week dated calendar	PDF, 15 pp	HTML	—
F8.1	Vocabulary in context — half the English block	PDF, 29 pp	HTML	40
F8.2	Para jumbles and sentence rearrangement	PDF, 17 pp	HTML	20
F8.3	Reading comprehension — four passages	PDF, 24 pp	HTML	20
F8.4	Grammar essentials and error spotting	PDF, 26 pp	HTML	30
F8.5	Arithmetic — ratio, percentage, average, ages, mixtures, time and work	PDF, 27 pp	HTML	35
F8.6	Mensuration and geometry	PDF, 26 pp	HTML	30
F8.7	Algebra, probability and the number system	PDF, 26 pp	HTML	30
F8.8	Data interpretation, and reasoning essentials	PDF, 24 pp	HTML	25

214 pages, 230 questions, and every format the 2023 paper used — 10 vocabulary, 5 para jumbles, 5 comprehension on one passage, and 15 Quant across arithmetic, mensuration, algebra, probability and data interpretation.

This module is not read, it is run. Thirty minutes an evening, in parallel with whatever module is running in the morning, on F8.0's calendar. Do not wait until you have read the eight chapters — go to **F8.0 §3, week 1, Monday** and start tomorrow, then read each chapter as the calendar reaches it.

Depth follows the evidence rather than being spread evenly. **F8.5 has the largest bank** because arithmetic supplied more 2023 items than any other Quant topic, and **F8.6 has the most known previous questions** — the hemisphere, the melted disc, circle geometry and heights and distances were all asked. **Grammar (F8.4) was not separately tested at all in 2023** and is written to be finished in two evenings, because its value is in protecting the vocabulary and para-jumble marks rather than in earning its own.

Reasoning is deliberately one session of one chapter. The 2023 paper contained **exactly one pure reasoning question in 120**. Every commercial book for this exam devotes hundreds of pages to syllogisms, blood relations and seating arrangements; on the available evidence that is a very poor use of your hours.

F8.8 §5 gives you the seven patterns that recover most of the value from a single question in about forty minutes of reading, and the Master Content Register records the decision so it is not silently reversed.

Module 11 — PYQ Analysis, Mocks & Final Revision · complete

The module that acts on all the others. It carries no marks of its own and is the highest-value block in the manual, because it works on the 300 marks already covered rather than adding to them.

Ch	Topic	PDF	On screen	Q
F11.1	Previous question analysis — the 2023 paper, module by module	PDF, 22 pp	HTML	25
F11.2	Full Mock 1 — 120 questions, 120 minutes, 300 marks	PDF, 33 pp	HTML	120
F11.3	Mock protocol, score analysis and final revision	PDF, 19 pp	HTML	—
F11.4	The trap catalogue — 30 structural traps, the confusion-pair compendium, and the elimination ladder	PDF, 47 pp	HTML	30
F11.5	Full Mock 2 — built out of the trap catalogue	PDF, 35 pp	HTML	120
F11.6	Full Mock 3 — calibrated above the paper, loaded with the formats that punish partial knowledge	PDF, 36 pp	HTML	120
F11.7	The Retention Engine — 4,403 spaced-repetition cards over the manual's own facts, and the schedule that makes them worth having	PDF, 8 pp	HTML	—

192 pages, 415 questions — the largest module in the manual. F11.1's bank is **25 questions set on the specific items the 2023 paper asked**. All three mocks have keys balanced at exactly **30/30/30/30**, so there is no letter to fall back on, and all three share an **identical composition** so that the three-mock trend in F11.6 §15.2 is a valid comparison.

F11.4 is the other half of F11.1 §1.2. That section proves a blind guess is worth zero and that eliminating one option turns a question positive — but only if the elimination is **real**. F11.4 catalogues the thirty ways UPSC manufactures an option designed to make you eliminate the *correct* one, and its §6 confusion-pair compendium is a **twenty-five-minute weekly revision asset** for the last weeks. Its §5 is the one to read first this cycle: with the codes in force from **21 November 2025** and the provident fund, pension and insurance schemes replaced on **29 June 2026**, **every Act and scheme year you memorised is now a ready-made distractor**, while most of the numbers did not move.

Three written mocks, on a deliberate ramp. F11.2 is set to the observed shape of the paper. **F11.5 is set to the trap catalogue** — nineteen of its items are built on a named F11.4 trap code and the superseded figure appears as a distractor eleven times. **F11.6 is set above the paper**, hardened not with obscurer facts but with the formats that convert partial knowledge into zero: **seven count items** against Mock 1's two, six assertion-reason items, and a pair-count item.

Sit them at weeks 8, 10 and 12. Expect the totals to fall and the **accuracy** to hold — F11.6 §15.2 explains why that trajectory is the good one, and which pattern instead means you are buying marks with volume and losing them to negatives.

Mocks 4 and 5 remain assembled rather than written. F11.3 §3 gives the recipe, and with Modules 1, 2, 3 and 5 supplied it now works fully. Two further hand-written papers would add little that F11.6's format loading does not already test.

F11.7 attacks the problem F11.3 §1 names and nothing else acted on. With the syllabus covered, the binding constraint is **decay**, not coverage — and a wall sheet is the right content fought with the wrong mechanism, because re-reading builds fluency and fluency is mistaken for mastery. `decks/` holds **4,403 cards generated from these chapters**, in seven decks: numbers on the shortest interval, and a discrimination deck that names the distractor, because F11.4's whole thesis is that this paper is lost to confusion rather than ignorance. **Twenty minutes daily, due reviews first, no new cards inside the last fourteen days.** The decks are regenerated by `build/decks.py`, never hand-edited — which matters when a figure's governing instrument changes, as most of them did in 2025–26.

Module 12 — The Interview · complete

100 marks, 25 per cent of final merit, and the stage this manual previously did not cover. Because RT marks are **not discarded**, the interview is **added** to your written score rather than replacing it — which means **one interview mark is worth three RT marks** in merit terms, 100 marks being weighted to 25 against 300 weighted to 75.

Ch	Topic	PDF	On screen	Q
F12.1	The interview — what it is, the board's conduct, and mining your own bio-data	PDF, 16 pp	HTML	—
F12.2	The EPFO domain dossier — the post, the organisation, the law and the numbers, in spoken form	PDF, 14 pp	HTML	—
F12.3	Opinion frames, situational judgment, and a 60-question rehearsal bank	PDF, 12 pp	HTML	60

42 pages. The module carries **no Recruitment Test marks** — the RT ledger stays closed at 300.0 — and it is not scored by `check.py`'s answer-key gate, because its 60 questions are **spoken rehearsal prompts** rather than multiple-choice items.

Three ideas run through it. You are scored on the **reasoning**, not the answer, and on what you do when you do not know — so F12.1 §6's *I don't know* protocol gains marks rather than losing them. Three frames

cover almost every question: state-context-stop for factual, **acknowledge-analyse-position** for opinion, and **facts-law-options-decision-safeguard** for situational. And the advantage you already hold is **currency**: very few candidates at an APFC board can say accurately that the Codes commenced on 21 November 2025, that the 1952, 1995 and 1976 schemes were each replaced on 29 June 2026, that the ceiling is still ₹15,000 because ₹25,000 is approved but **not notified**, and that an APFC's powers now flow from Chapter III of the Code. F12.2 is the structure in which to deploy that.

Write F12.1 §3's dossier now, even if the RT is months away. It does not decay, it takes a day, and it is the most valuable day in the module. Run the rest in the gap after the written paper.

Module 10 — Integrated Current Affairs · complete

Ch	Topic	PDF	On screen	Q
F10.1	The current affairs system — method, attributions, watchlist, verification sweep	PDF, 26 pp	HTML	20
F10.2	Schemes, institutions and the current dossier	PDF, 26 pp	HTML	30
F10.3	Twelve-month dossier I — governance, law, economy, labour and social security	PDF, 33 pp	HTML	40
F10.4	Twelve-month dossier II — international, reports, science, defence, awards and sport	PDF, 29 pp	HTML	35

114 pages, 125 questions. The module is split between **a method that does not decay and dossiers that do**. F10.1 carries the collection system and the report-to-publisher table, which is permanently askable; F10.2 carries the current position by subject; **F10.3 and F10.4 are the exhaustive twelve-month record, August 2025 to a cut-off of 1 August 2026**, with every item sourced by an inline link.

Read F10.3 §1 twice. Labour, social security and the EPFO is the longest section in the dossier and the part no general compilation will give you — the labour codes' rules, the EPF interest rate, EPS 2026, EPFO 3.0, the ELI Scheme, the ESI-PM-JAY convergence, the India-UK Double Contributions Convention, and the notification of **Assistant Provident Fund Commissioners as Recovery Officers** under the Code on Social Security.

Two things this dossier does that a coaching compilation will not. Where sources disagree it records **only what they agree on** — F10.3 §3.3 gives the winner of each 2026 State election but withholds the seat counts, and explains why. And where a figure comes from a compilation rather than the publishing body, it **says so and builds no question on it** — F10.4 §2.3.

Run F10.1 §4's twelve-item verification sweep in the fortnight before the paper. Diarise it now. A stale figure carried confidently costs -0.8333; a blank costs nothing.

Module 4 — Indian Economy, Population & Globalisation · complete

Ch	Topic	PDF	On screen	Q
F4.1	National income, growth and planning	PDF, 22 pp	HTML	20
F4.2	Money, banking and inflation	PDF, 25 pp	HTML	22
F4.3	Public finance, the Budget and taxation	PDF, 26 pp	HTML	22
F4.4	Poverty, unemployment and human development	PDF, 23 pp	HTML	20
F4.5	Population, demography and globalisation	PDF, 23 pp	HTML	20

119 pages, 104 questions, written **deliberately lean** — 15 marks over 8 hours, and the lowest-certainty module in the syllabus. Four teaching sessions a chapter instead of six, definition tables instead of derivations, full question banks retained.

Give F4.2 the largest share of the module's hours. Money, banking and the index numbers are the part of economy with **definite answers**, and definite answers are what an examiner reaches for.

Three things in this module make older material wrong: GST now has **two main slabs, 5% and 18%** (F4.3 §3.2); the **Income-tax Act, 2025** replaced the 1961 Act on 1 April 2026 (F4.3 §3.3); and India's **fertility has fallen below replacement level** (F4.5 §1.3).

Module 6 — Accounting, Auditing & Statistics · complete

Ch	Topic	PDF	On screen	Q
F6.1	Accounting fundamentals — equation, double entry, books, trial balance, error types	PDF, 39 pp	HTML	40
F6.2	Concepts, conventions, standards — and capital versus revenue	PDF, 35 pp	HTML	40
F6.3	Final accounts, adjustments, provisions and reserves	PDF, 28 pp	HTML	30
F6.4	Depreciation, goodwill and inventory valuation	PDF, 26 pp	HTML	30
F6.5	Ratio analysis and cash flow	PDF, 22 pp	HTML	25
F6.6	Bills of exchange and share capital	PDF, 24 pp	HTML	25
F6.7	Auditing — concepts, scope, types, audit report	PDF, 29 pp	HTML	30
F6.8	Statistics — central tendency, dispersion, correlation	PDF, 21 pp	HTML	25

Module 9 — General Science & Computer Applications · complete

Ch	Topic	PDF	On screen	Q
F9.1	Physics I — units, kinematics, motion, energy, fluids	PDF, 22 pp	HTML	30
F9.2	Physics II — optics, heat, sound, electricity, modern physics	PDF, 26 pp	HTML	30
F9.3	Chemistry — atoms, pH, soaps, enthalpy, everyday substances	PDF, 26 pp	HTML	30
F9.4	Biology and environment	PDF, 25 pp	HTML	30
F9.5	Computer fundamentals, memory and number systems	PDF, 23 pp	HTML	30
F9.6	Operating systems, software and programming	PDF, 22 pp	HTML	25
F9.7	Networking, the internet and HTML	PDF, 24 pp	HTML	25

168 pages, 200 questions — and all twenty of the 2023 science and computer items are covered. Every known previous question from this block maps to a section.

Two different layers inside one module. F9.1 to F9.4 are a **recall layer** — physics and chemistry are your undergraduate foundation, so they are tables and practice rather than instruction. F9.5 to F9.7 are a genuine **Foundation layer**, because the blueprint warns that the C, HTML and operating-system items need real preparation.

The cheapest marks in the module: **number-system conversions** (F9.5 §5) and the **mesh-link formula** (F9.7 §2.2). Both are deterministic — once the rule is known they cannot be got wrong.

Module 7 — Insurance · complete

Ch	Topic	PDF	On screen	Q
F7.1	Insurance — principles, types and social insurance	PDF, 21 pp	HTML	20

Reading order, and the shortcuts

Module 8 runs in parallel with everything else — it is the evening 30 minutes, from week 1, and it is never a block. The rest is sequential.

Within Module 6, read **F6.1 » F6.2 » F6.3 » F6.4** in order; each depends on the one before. F6.5 to F7.1 are independent and can be taken in any order. Module 9's chapters are independent of each other.

Within Module 8, the chapters are independent, but **F8.0 comes first** and the calendar interleaves the rest deliberately — English one evening, Quant the next.

If your time collapses, these are the sections that carry the most marks:

- **F8.0 §4.1** — the fraction, decimal and percentage equivalents. The single highest-value page in the Quant half: it converts most percentage questions into one-step multiplications
- **F11.1 §1.2 and §3.1** — the marking arithmetic, and the fact that **a fifth of the paper is negatively framed**. Two pages that are worth marks in every other module
- **F8.6 §2.2** — the hemisphere's three surface areas, and which one a question is asking for
- **F8.7 §2** — the sum and product of the roots of a quadratic. Most questions about roots never require you to find them
- **F8.8 §4.1** — percentage against percentage point, the most examined distinction in data interpretation
- **F8.1 §5** — the word list, ten a day, every day. Half the English block
- **F10.1 §2.2** — the report-to-publisher table. Permanent answers, learnable in an evening
- **F10.2 §1 and §2** — the labour codes and the EPFO dossier, directly on the subject of the post
- **F10.3 §1** — the twelve-month labour and social security record, including the **DCC** and the notification of **APFCs as Recovery Officers**
- **F4.2 §2 and §3** — the RBI's corridor and the CPI/WPI comparison
- **F6.1 §6** — trial balance and the four errors it cannot catch
- **F6.2 §5** — capital versus revenue, and the five one-word pairs
- **F6.3 §5 and §6** — the year-end adjustments, and provision versus reserve
- **F6.4 §2 and §5** — SLM versus WDV, and AS 2's lower of cost and net realisable value
- **F6.7 §2** — the scope of audit, the only section in Module 6 with direct PYQ evidence

Project state

The **Master Content Register** is the source of truth. Read it first if you are resuming after a break.

- **Complete: all eleven RT modules** — 84 chapters including Module 12, 230 hours, **300.0 RT planning marks. The syllabus is closed — **plus** Module 12** for the 100-mark interview, which carries no RT marks

- **In this repository:** Modules 4, 6, 7, 8, 9, 10, 11 and 12 — **44 chapters, 1,106 pages, 1,339 multiple-choice questions, **60 interview rehearsal prompts** and 4,403 spaced-repetition cards** in `decks/`
- **Not here: Modules 1, 2, 3 and 5** are complete as study material but have never been supplied — 44 chapters and **97.5 marks**. See register §9. `pyq/` is also still empty

What to do next

There is nothing left to read before you begin. The remaining work is execution.

1. **Start F8.0's drill tomorrow evening.** Week 1, Monday: F8.1 §7 Q1–20, timed. The programme's value is the daily habit, and it does not begin until the first cell is done
2. **Import `decks/` and start the twenty minutes.** F11.7 §3 is a forty-minute setup done once. Begin with Decks 1 and 2 only — numbers and discriminations — because those are the cards whose absence costs marks rather than merely leaving gaps. Starting this late cannot be made up by working harder later
3. **Re-supply Modules 1, 2, 3 and 5**, Modules 2 and 3 first. They are **97.5 marks**, the coldest material you own, and — because the labour codes and EPS 2026 have superseded much of what they teach — possibly the least current. Register §10 has the three checks to run against them
4. **Sit the three mocks** — F11.2 at week 8, **F11.5 at week 10**, **F11.6 at week 12** — under F11.3 §1.1's conditions, completing each score analysis before moving on. F11.6 §15.2's three-mock trend is the only chart that matters
5. **Write F12.1 §3's interview dossier now.** It does not decay, and the interview is the stage where one mark is worth three
6. **Diarise F10.1 §4's twelve-item verification sweep** for the fortnight before the paper
7. **Follow F11.3 §4.2** in the last four weeks — wall sheets, the error log, and no new material

And supply the 2015 and 2023 papers into `pyq/` when you can: they are needed for 44 of the 120 questions in every assembled mock, and for a real repeat-rate analysis.

Rebuilding

```
`` python3 build/build.py # src/*.md -> docs/*.html python3 build/check.py # quality gate — must pass before commit env
-u NODE_OPTIONS node build/pdf.mjs # docs/*.html -> pdf/*.pdf ``
```

`env -u NODE_OPTIONS` is not optional: the environment presets a `--require` hook pointing at a file that does not exist, so every plain `node` call dies with `MODULE_NOT_FOUND`.

Sources in `src/` are the master manuscript. `docs/` and `pdf/` are generated — never edit them by hand.
