

Population, Demography and Globalisation

Chapter F4.5 — The Demographic Transition, the First Digital Census, and the External Sector

Module	Foundation Layer — Module 4 — Indian Economy, Population, Development and Globalisation
Chapter	Chapter F4.5
Topic	Official syllabus head — Population, Development and Globalisation
Version	v1.0
Compiled	16 August 2026
Exam stage	Recruitment Test (RT)

HIGH YIELD · TWO DEMOGRAPHIC FACTS HAVE CHANGED, AND BOTH ARE LIKELY QUESTIONS

This chapter closes Module 4, and like F4.3 it carries developments recent enough that older material is now wrong on them.

1. **India's total fertility rate has fallen BELOW replacement level.** For thirty years the standard statement was that India was approaching replacement but had not reached it. That is no longer true — §1.3 gives the figures and the sources. **An option asserting that India's TFR is above replacement level is now a wrong option**, and it is the one most textbooks would mark correct
2. **Census 2027 is under way, and it is India's first digital census.** Phase I began in 2026. It also includes **caste enumeration**, the first time since 1931. §2.3 gives the dates

Both are the kind of definite, dateable, recently-changed fact that an examiner setting a 2026 paper reaches for — the pattern established in F4.3's opening callout.

Table of Contents

0. How This Chapter Works

1. Session 1 — Demographic Concepts ★★★★★

1.1 The rates, and what each is measured per

1.2 The demographic transition

1.3 Where India now stands

2. Session 2 — The Census ★★★★★★

2.1 The machinery

2.2 The 2011 profile — still the latest completed census

2.3 Census 2027

3. Session 3 — The Demographic Dividend ★★★★★★

3.1 The concept

3.2 Population policy

4. Session 4 — Globalisation and the External Sector ★★★★★★

4.1 The 1991 reforms

4.2 The balance of payments

4.3 The institutions

5. Graded Practice — 20 Questions ★★★★★★

5.1 Level 1 — Demographic concepts

5.2 Level 2 — Globalisation and the external sector

5.3 Level 3 — Recruitment Test standard

6. Answers and Explanations

7. One-Minute Revision

8. Five-Minute Wall Sheet

0. How This Chapter Works

STUDY SESSION · CHAPTER F4.5

1. **Session 1** — Demographic concepts and the transition (§1) ★★★★★
2. **Session 2** — The Census, and India's demographic profile (§2) ★★★★★★
3. **Session 3** — The demographic dividend and population policy (§3) ★★★★★★
4. **Session 4** — Globalisation and the external sector (§4) ★★★★★★

Then 20 graded questions in §5. Budget **one evening**. This completes Module 4.

1. Session 1 — Demographic Concepts ★★★★★

1.1 The rates, and what each is measured per

MUST MASTER · THE DENOMINATOR OF EVERY DEMOGRAPHIC RATE

Almost every question in this session is answered by knowing **what a rate is measured per**. Learn the right-hand column.

Measure	Definition
Crude Birth Rate (CBR)	Live births per 1,000 population per year
Crude Death Rate (CDR)	Deaths per 1,000 population per year
Natural growth rate	CBR - CDR — excludes migration
Total Fertility Rate (TFR)	Average number of children per woman over her reproductive life
Infant Mortality Rate (IMR)	Deaths under one year of age per 1,000 LIVE BIRTHS
Maternal Mortality Ratio (MMR)	Maternal deaths per 1,00,000 LIVE BIRTHS
Under-five mortality	Deaths before age five per 1,000 live births
Sex ratio	Females per 1,000 males (the Indian convention)
Child sex ratio	Females per 1,000 males in the 0–6 age group
Density	Persons per square kilometre
Dependency ratio	Population outside the working age group (0–14 and 60+) ÷ working-age population
Replacement level fertility	A TFR of about 2.1

The three that are most often got wrong:

1. **IMR is per 1,000 live births; MMR is per 1,00,000 live births.** Different denominators, and both are offered for each other. MMR uses the larger base because maternal deaths are far rarer

2. **The sex ratio in India is females per 1,000 males** — the reverse of the convention in several other countries. A ratio *below* 1,000 therefore means fewer women than men
3. **Replacement level is 2.1, not 2.0.** The extra tenth allows for girls who do not survive to reproductive age, which is why the figure exceeds two

1.2 The demographic transition

The theory describes the path from high birth and death rates to low ones as an economy develops.

Stage	Birth rate	Death rate	Population
1 High stationary	High	High	Nearly stable — growth is slow because deaths offset births
2 Early expanding	High	Falling	Growing fast — the widest gap opens here
3 Late expanding	Falling	Low	Still growing, but decelerating
4 Low stationary	Low	Low	Nearly stable again
5 Declining	Very low	Low	Shrinking

The trap in stage 1 and stage 4: both have **near-stable populations**, but for opposite reasons — high births offset by high deaths in stage 1, low births matched by low deaths in stage 4. A question describing "both rates high and population growing slowly" is stage 1; "both rates low" is stage 4.

Population growth is fastest in stage 2, when death rates have fallen but birth rates have not yet followed. That lag is the whole mechanism of population explosion.

1.3 Where India now stands

KNOW · INDIA'S FERTILITY HAS FALLEN BELOW REPLACEMENT [AS AT 16 AUG 2026] · RE-VERIFY

Source	TFR
Sample Registration System, 2024 report	1.9
NFHS-6 (2023-24)	2.0
Replacement level	2.1

On either figure, India is below replacement level. Only about **six States** now record a TFR above replacement, and India is among the majority of countries and territories worldwide with fertility below replacement.

Sources: Times of India on the SRS 2024 figure of 1.9 · Data for India on the TFR · PRS Vital Stats on replacement level

Note the two different figures, exactly as with GDP growth in F4.1 §3.1: the **SRS** and the **NFHS** are different instruments and give slightly different readings. Both are below 2.1, so the *conclusion* is robust even though the *number* depends on the source. If an option set contains both, read the stem for which survey it names.

The apparent paradox worth understanding: India's **population is still rising** while fertility is below replacement. There is no contradiction — **population momentum** means a young age structure keeps producing more births than deaths for decades after fertility falls, because a large cohort of women is still passing through the reproductive ages. *Content rephrased from the sources for compliance with licensing restrictions.*

CHECK YOURSELF · SESSION 1

1. Give the denominator for CBR, IMR, MMR, sex ratio and density
2. Why is replacement level 2.1 rather than 2.0?
3. Name the five stages of the transition, and say which has the fastest growth and why
4. Why do stages 1 and 4 both show stable populations?
5. Is India's TFR above or below replacement? How can population still be rising?

2. Session 2 — The Census ★★★★★

2.1 The machinery

Fact	
First census	1872, under Lord Mayo — non-synchronous
First synchronous census	1881, under Lord Ripon
Periodicity	Decennial, uninterrupted from 1881 until 2011
Legal basis	The Census Act, 1948
Conducting authority	The Registrar General and Census Commissioner of India, under the Ministry of Home Affairs
Constitutional entry	Union List, Entry 69

The 1872 / 1881 pair is the standard question. 1872 was the first census; 1881 was the first synchronous one, and the unbroken decennial series is counted from 1881.

2.2 The 2011 profile — still the latest completed census

The 2021 census was postponed, so Census 2011 remains the most recent completed enumeration, and its figures are still the ones examined.

Indicator	2011
Population	about 1,210.9 million (121 crore)
Decadal growth	about 17.7%
Density	382 persons per sq km
Sex ratio	943 females per 1,000 males
Child sex ratio (0–6)	919 — a historic low
Literacy	about 74%
Most populous State	Uttar Pradesh
Most densely populated State	Bihar
Highest sex ratio (State)	Kerala , about 1,084
Lowest sex ratio (State)	Haryana , about 879

The one to note is the child sex ratio of 919, lower than the overall 943 — meaning the imbalance was **worse among children than among adults**, which is the finding that makes it a policy question rather than a historical one.

2.3 Census 2027

HIGH YIELD · THE FIRST DIGITAL CENSUS, AND THE RETURN OF CASTE ENUMERATION [AS AT 16 AUG 2026]

Feature	
Phase I — Houselisting and Housing Census	April to September 2026 , each State taking a 30-day window, with a 15-day self-enumeration option beforehand
Phase II — Population Enumeration	9 to 28 February 2027 for the country generally
Reference date	1 March 2027 — and 1 October 2026 for snow-bound areas
Snow-bound areas	Ladakh and snow-bound parts of Jammu and Kashmir, Himachal Pradesh and Uttarakhand enumerated earlier, from 17 August to 30 September 2026
First digital census	Enumeration by mobile application, with a self-enumeration facility
Caste enumeration	Included , decided by the Cabinet Committee on Political Affairs on 30 April 2025 — the first full caste enumeration since 1931
Census Commissioner	Mritunjay Kumar Narayan

Sources: All India Radio on the census launch and reference date · PIB document on caste enumeration in Census 2027 · The Hindu on the phasing

The examinable points: two phases, the **1 March 2027 reference date**, the **first digital census**, and the **inclusion of caste**. Note the counter-intuitive sequencing — **the snow-bound areas are enumerated first**, in 2026, because February access is impossible, and they therefore have a different reference date. *Content rephrased from the sources for compliance with licensing restrictions.*

CHECK YOURSELF · SESSION 2

1. Give the year of the first census and of the first synchronous census, with the Viceroy
2. Under which Act, and by which officer under which Ministry, is the census conducted?
3. Give the 2011 population, sex ratio, child sex ratio and density
4. Which State had the highest and which the lowest sex ratio in 2011?
5. Give Census 2027's two phases, its reference date, and two features that are new

3. Session 3 — The Demographic Dividend ★★★★★

3.1 The concept

The **demographic dividend** is the growth potential that arises when the **share of the working-age population (15–59 or 15–64) is high** relative to dependants — a **temporary window**, opened by falling fertility and closed by ageing.

Three points that follow, and all three are examinable:

1. **It is a window, not a condition.** It opens when fertility falls (fewer children to support) and closes as the large working cohort ages into dependency. India's window is generally put as lasting into the **2050s**
2. **It is potential, not automatic.** The dividend is realised only if the working-age population is **educated, healthy and employed**. A large young population without jobs is a liability, not a dividend — which connects directly to F4.4 §2's low participation rates
3. **The dependency ratio is the operative statistic**, and it **falls** when the dividend opens

India's median age is now about 28 to 29 years, against the low 40s in most of Europe and East Asia — the basis for the claim that India will supply a large share of the world's incremental workforce.

3.2 Population policy

Item	
First official family planning programme	1952 — India was the first country in the world to adopt one
National Population Policy	2000
NPP's stated goal	Achieving replacement level fertility — the target date of 2010 was not met, though the goal has since been reached, per §1.3
National Commission on Population	2000, chaired by the Prime Minister
Mission Parivar Vikas	Focused effort in high-fertility districts

Two facts worth holding: India was the first country to adopt a national family planning programme, in 1952, and the **National Population Policy is of 2000**. Both are commonly asked and easily confused with the emergency-era coercive episode of 1976, which was a programme excess rather than a policy.

KNOW · WHY THE DIVIDEND MATTERS TO THE EPFO SPECIFICALLY

A provident fund and a pension scheme are **demographically leveraged institutions**. While the working-age share is rising, contributions grow faster than claims and the corpus builds. When the dividend closes and the dependency ratio rises, **claims grow faster than contributions**.

That is the actuarial background to everything in Module 3: the Employees' Pension Scheme is a defined benefit obligation whose cost depends on how long members live after retirement, which is precisely what F6.4's AS 15 distinction between defined contribution and defined benefit plans is about.

For the interview: India's demographic window is the reason the EPFO's finances look comfortable now, and the reason coverage expansion — bringing gig and platform workers in, per the Code on Social Security, 2020 — is more urgent than the current surplus suggests.

CHECK YOURSELF · SESSION 3

1. Define the demographic dividend and say why it is temporary
2. What must be true for the dividend to be realised rather than merely available?
3. What happens to the dependency ratio when the window opens?
4. Give the year of India's first family planning programme and of the National Population Policy

4. Session 4 — Globalisation and the External Sector ★★★★★

4.1 The 1991 reforms

Fact

The trigger A **balance of payments crisis** — reserves down to a few weeks of imports

The programme **Liberalisation, Privatisation, Globalisation (LPG)** — the New Economic Policy

Finance Minister **Manmohan Singh**, under Prime Minister **P V Narasimha Rao**

Measures Abolition of industrial **licensing** for most industries, **devaluation**, tariff reduction, opening to FDI, **disinvestment**, reduction of the public sector's reserved areas

FERA replaced **FERA, 1973 replaced by FEMA, 1999** — a shift from *regulation* to *management*, and from criminal to civil penalties

4.2 The balance of payments

MUST MASTER · WHICH ACCOUNT EACH ITEM GOES IN

Account	Contents
Current account	Merchandise trade (visibles) + invisibles — services, remittances , and investment income
Capital account	FDI, FPI, external borrowing, banking capital , and changes in reserves

The item most often misplaced is remittances. Personal transfers from Indians working abroad are **invisibles in the CURRENT account** — not the capital account, and **not** net factor income from abroad, which is a national-accounting concept covering *factor* income rather than transfers. F4.1 §1.1 makes the same point from the other side, and the two together are why India's current account benefits from remittances while its GNP does not.

FDI against FPI — the distinction is **control**:

- **FDI** brings **management participation**, is long-term, and is harder to reverse
- **FPI** is investment in **securities without control**, and is **volatile** — "hot money"

Convertibility: the rupee is **fully convertible on the CURRENT account** (since 1994, under Article VIII of the IMF's Articles) but **NOT fully convertible on the capital account**. The **Tarapore Committees** laid out a road map for capital account convertibility that has not been fully implemented. That asymmetry is the single most examined fact about the rupee.

4.3 The institutions

Institution	
IMF and World Bank	Created at the Bretton Woods Conference, 1944 ; both headquartered in Washington DC
IMF's function	Short-term balance of payments support; its unit of account is the Special Drawing Right (SDR)
World Bank Group	IBRD, IDA, IFC, MIGA, ICSID — IDA lends on concessional terms
GATT	1947 , a provisional agreement, not an organisation
WTO	Established 1 January 1995 , by the Marrakesh Agreement concluding the Uruguay Round . Headquarters Geneva . India is a founder member
WTO decision-making	By consensus ; it has a binding Dispute Settlement mechanism, which GATT lacked

The **GATT-to-WTO transition is the standard question: GATT 1947 was an agreement; the WTO from 1 January 1995 is an organisation** with legal personality and enforceable dispute settlement.

CHECK YOURSELF · SESSION 4

1. What triggered the 1991 reforms, and who were the Finance Minister and Prime Minister?
2. Which Act replaced FERA, and in what year, and what changed in principle?
3. In which account do remittances appear? FDI? A change in reserves?
4. Distinguish FDI from FPI in one word, then in one sentence
5. On which account is the rupee fully convertible, and on which not?
6. Give the year, place and founding agreement of the WTO, and what preceded it

5. Graded Practice — 20 Questions ★★★★★

Target: 25 to 35 seconds each.

5.1 Level 1 — Demographic concepts

- Q1.** Replacement level fertility corresponds to a total fertility rate of about (a) 1.5 (b) 2.1 (c) 2.5 (d) 3.0
- Q2.** The first **synchronous** census in India was conducted in (a) 1872 (b) 1891 (c) 1901 (d) 1881
- Q3.** The Census of India is conducted under the authority of (a) the Constitution directly (b) regulations framed by the Registrar General (c) the Census Act, 1948 (d) the Collection of Statistics Act, 2008
- Q4.** The reference date fixed for the population enumeration phase of Census 2027 for the country generally is (a) 1 March 2027 (b) 1 January 2027 (c) 30 September 2026 (d) 1 April 2027
- Q5.** According to the Census of 2011, India's sex ratio was (a) 927 (b) 933 (c) 940 (d) 943
- Q6.** The infant mortality rate is the number of deaths of infants under one year of age per (a) 100 live births (b) 1,000 live births (c) 10,000 live births (d) 1,00,000 live births
- Q7.** The maternal mortality ratio is expressed per (a) 1,000 live births (b) 10,000 women (c) 1,00,000 live births (d) 1,000 women of reproductive age
- Q8.** In the theory of demographic transition, the stage in which both birth and death rates are high and population grows only slowly is (a) the high stationary stage (b) the early expanding stage (c) the late expanding stage (d) the low stationary stage
- Q9.** The demographic dividend refers to (a) the absolute size of a country's population (b) the excess of births over deaths in a year (c) subsidies paid to large families (d) the growth potential arising from a high share of working-age population
- Q10.** India's National Population Policy was adopted in (a) 1976 (b) 1983 (c) 2000 (d) 2010

5.2 Level 2 — Globalisation and the external sector

- Q11.** The economic reforms initiated in India in 1991 are commonly described as (a) liberalisation, privatisation and globalisation (b) nationalisation, planning and control (c) import substitution and industrial licensing (d) devaluation and demonetisation
- Q12.** The Foreign Exchange Regulation Act, 1973 was replaced by (a) the Companies Act, 1956 (b) the Foreign Exchange Management Act, 1999 (c) the SEBI Act, 1992 (d) the Competition Act, 2002
- Q13.** The World Trade Organization came into existence on (a) 1 January 1948 (b) 1 January 1994 (c) 15 April 1994 (d) 1 January 1995
- Q14.** The World Trade Organization has its headquarters at (a) New York (b) Washington DC (c) Geneva (d) Paris
- Q15.** In India's balance of payments, remittances from Indians working abroad are recorded in (a) the current account, under invisibles (b) the capital account (c) net factor income from abroad (d) the reserve

tranche position

Q16. Foreign portfolio investment differs from foreign direct investment in that it (a) is always larger in value (b) does not confer management control (c) is prohibited in India (d) may be routed only through the Reserve Bank

5.3 Level 3 — Recruitment Test standard

Q17. The Indian rupee is at present (a) fully convertible on both the current and the capital account (b) not convertible on either account (c) fully convertible on the current account but not fully convertible on the capital account (d) convertible only for the import of petroleum

Q18. The International Monetary Fund and the World Bank were established as a result of (a) the Treaty of Versailles (b) the Marrakesh Agreement (c) the Uruguay Round (d) the Bretton Woods Conference of 1944

Q19. Which one of the following statements is **not** correct? (a) India's total fertility rate is above the replacement level (b) The Census of India is conducted decennially (c) Kerala recorded the highest sex ratio among the major States in Census 2011 (d) The demographic dividend is a temporary window rather than a permanent condition

Q20. The dependency ratio is the ratio of (a) the rural population to the urban population (b) the population outside the working age group to the working-age population (c) the female population to the male population (d) unemployed persons to employed persons

6. Answers and Explanations

6.1 Level 1

Q	Ans	Explanation
1	b	2.1 , not 2.0 — the extra tenth allows for girls who do not survive to reproductive age
2	d	1881 , under Lord Ripon. 1872 was the first census but was non-synchronous , which is exactly what the word in the stem is testing — (a) is the answer to the question without that word
3	c	The Census Act, 1948 . Census is Entry 69 of the Union List , but the operative authority is the Act
4	a	1 March 2027 . Note that snow-bound areas have a different reference date, 1 October 2026, which is why (c) is offered — §2.3
5	d	943 females per 1,000 males. (a) 927 and (b) 933 are the ratios of earlier censuses, so the question is really about which census
6	b	Per 1,000 live births . Contrast Q7 immediately
7	c	Per 1,00,000 live births — a larger base than IMR because maternal deaths are far rarer. The IMR/MMR denominator pair is the commonest confusion in the topic
8	a	The high stationary stage . Both rates high, and they offset each other. (d) also gives a stable population but with both rates low — the two stable stages, for opposite reasons
9	d	The growth potential from a high working-age share . It is about the age structure , not the size — which is what (a) tests
10	c	2000 . (a) 1976 was the year of the coercive family planning excesses of the Emergency, a programme episode rather than a policy

6.2 Level 2

Q	Ans	Explanation
11	a	Liberalisation, privatisation and globalisation. (b) and (c) describe the regime the reforms dismantled
12	b	FEMA, 1999 — a shift from <i>regulation</i> to <i>management</i> , and from criminal prosecution to civil penalties
13	d	1 January 1995. (a) 1948 is when GATT took effect; (c) 15 April 1994 is when the Marrakesh Agreement was signed , which is a genuinely different date from when the WTO came into being — a well-made distractor
14	c	Geneva. (b) Washington DC is the IMF and the World Bank, which is the standard confusion
15	a	The current account, under invisibles. Remittances are transfers , so they are neither capital account items nor net factor income from abroad — (c) is the trap for a candidate who has just read F4.1 §1.1
16	b	It does not confer management control , which is the definitional difference, and the reason FPI is volatile while FDI is not

6.3 Level 3

Q	Ans	Explanation
17	c	Fully convertible on the current account, not fully on the capital account. Current account convertibility dates from 1994; capital account convertibility remains partial, the Tarapore Committees' road map not having been fully implemented
18	d	The Bretton Woods Conference of 1944. (b) and (c) belong to the WTO — the two institutional families are set against each other here and in Q13 and Q14
19	a	The "not correct" item, and the current-affairs point of the chapter. India's TFR is now below replacement — 1.9 on the SRS and 2.0 on NFHS-6, against a replacement level of 2.1. (b), (c) and (d) are all correct. This is the option most study material would mark as true
20	b	The non-working-age population divided by the working-age population. It falls when the demographic dividend opens

THINK LIKE UPSC · THE FOUR SHAPES IN THIS BANK

1. **The qualifying word in the stem.** Q2 hinges on **synchronous**, Q7 on **ratio** rather than rate, Q17 on **which account**. Remove one adjective from any of those stems and a different option becomes correct. This is F8.3 §4's discipline applied to a factual paper: **read the stem twice**
2. **The denominator.** Q1, Q6, Q7, Q20. Four of twenty questions are answered by knowing what a rate is measured *per*. Memorise demographic measures as fractions
3. **Two institutional families.** Q13, Q14, Q18. Bretton Woods 1944 gave the IMF and the World Bank, in Washington; GATT 1947 became the WTO in 1995, in Geneva. Keep the two sets apart and three questions answer themselves
4. **The fact that has just changed.** Q19. India's fertility falling below replacement inverts a statement that was safely true for thirty years. **Where a question asserts a long-standing generalisation about a trending statistic, check whether the trend has crossed the line**

7. One-Minute Revision

ONE-MINUTE REVISION · CHAPTER F4.5

DENOMINATORS CBR, CDR per 1,000 POPULATION · IMR per 1,000 LIVE BIRTHS · MMR per 1,00,000 LIVE BIRTHS · under-five per 1,000 live births · **sex ratio = FEMALES per 1,000 MALES** · child sex ratio 0–6 · density per sq km · **dependency ratio = non-working-age ÷ working-age** · **replacement fertility 2.1**, the extra tenth for girls not surviving to reproductive age

TRANSITION 1 high stationary (both high, stable) · **2 early expanding** (deaths fall first, **fastest growth**) · 3 late expanding (births fall) · **4 low stationary** (both low, stable) · 5 declining · **stages 1 and 4 are both stable, for OPPOSITE reasons**

INDIA'S FERTILITY [AS AT 16 AUG 2026] **BELOW replacement** — **SRS 2024: 1.9 · NFHS-6: 2.0 · replacement 2.1** · only about **six States** above replacement · **population still rises because of POPULATION MOMENTUM** — a young age structure

CENSUS first 1872 (Mayo, non-synchronous) · first synchronous 1881 (Ripon) · decennial · **Census Act 1948 · Registrar General and Census Commissioner, under the MINISTRY OF HOME AFFAIRS · Union List Entry 69**

CENSUS 2011 — still the latest completed population about **121 crore** · growth **17.7%** · density **382** · **sex ratio 943** · **child sex ratio 919** (worse than the overall figure) · literacy about **74%** · most populous **UP** · densest **Bihar** · highest sex ratio **Kerala (1,084)** · lowest **Haryana (879)**

CENSUS 2027 [AS AT 16 AUG 2026] **Phase I houselisting April–Sept 2026 · Phase II enumeration 9–28 Feb 2027 · reference date 1 MARCH 2027**, but **1 Oct 2026 for snow-bound areas**, enumerated **first** · **first DIGITAL census**, with self-enumeration · **CASTE enumeration included** (CCPA, 30 April 2025), first since **1931**

DIVIDEND high **working-age share** · a **temporary window**, into the **2050s** · **potential, not automatic** — needs education, health and jobs · **dependency ratio FALLS** when it opens · median age about **28–29**

POPULATION POLICY 1952 — India the FIRST country with a national family planning programme · National Population Policy 2000 · National Commission on Population chaired by the **PM** · Mission Parivar Vikas

1991 REFORMS trigger a **balance of payments crisis** · **LPG** · **Manmohan Singh** under **Narasimha Rao** · licensing abolished, devaluation, disinvestment · **FERA 1973 » FEMA 1999**, regulation to **management**, criminal to **civil**

BALANCE OF PAYMENTS current = **merchandise trade + invisibles (services, REMITTANCES, investment income)** · capital = **FDI, FPI, borrowing, banking capital,**

reserves · remittances are CURRENT account transfers — not capital account, not NFIA

FDI vs FPI the difference is **CONTROL** · FDI long-term with management participation · **FPI no control, volatile, hot money**

CONVERTIBILITY rupee fully convertible on the **CURRENT account (1994, IMF Article VIII)**; **NOT fully on the CAPITAL account** · **Tarapore Committees** on the road map

INSTITUTIONS Bretton Woods 1944 » IMF and World Bank, both Washington DC · IMF unit of account the **SDR** · Bank Group **IBRD, IDA, IFC, MIGA, ICSID** — **IDA concessional** · **GATT 1947 was an AGREEMENT** · **WTO from 1 JANUARY 1995, Marrakesh Agreement, Uruguay Round, HQ GENEVA**, India a **founder member**, consensus decisions, **binding dispute settlement**

8. Five-Minute Wall Sheet

FIVE-MINUTE WALL SHEET · CHAPTER F4.5

IMR PER 1,000 LIVE BIRTHS · MMR PER 1,00,000 LIVE BIRTHS

SEX RATIO = FEMALES PER 1,000 MALES. BELOW 1,000 MEANS FEWER WOMEN

REPLACEMENT = 2.1, NOT 2.0

INDIA IS NOW *BELOW* REPLACEMENT — 1.9 (SRS) / 2.0 (NFHS-6)

POPULATION STILL RISES: MOMENTUM, NOT FERTILITY

FASTEST GROWTH IS STAGE 2 — DEATHS FALL BEFORE BIRTHS

STAGE 1 AND STAGE 4 ARE BOTH STABLE, FOR OPPOSITE REASONS

1872 FIRST CENSUS · 1881 FIRST *SYNCHRONOUS* · CENSUS ACT 1948 · HOME MINISTRY

2011: 121 CRORE · 943 SEX RATIO · 919 CHILD · 382 DENSITY · 74% LITERACY

KERALA HIGHEST, HARYANA LOWEST · UP MOST POPULOUS · BIHAR DENSEST

CENSUS 2027: FIRST DIGITAL · CASTE INCLUDED · REFERENCE DATE 1 MARCH 2027

SNOW-BOUND AREAS GO FIRST, WITH A 1 OCT 2026 REFERENCE DATE

DIVIDEND = A WINDOW, AND ONLY POTENTIAL. DEPENDENCY RATIO FALLS

1952 FIRST FAMILY PLANNING PROGRAMME · NPP 2000

FERA 1973 » FEMA 1999

REMITTANCES = CURRENT ACCOUNT INVISIBLES. NOT CAPITAL. NOT NFIA

FDI = CONTROL · FPI = NO CONTROL, VOLATILE

CURRENT ACCOUNT CONVERTIBLE · CAPITAL ACCOUNT NOT FULLY

BRETTON WOODS 1944 » IMF + WORLD BANK, WASHINGTON

GATT 1947 AGREEMENT » WTO 1 JAN 1995, GENEVA

WHERE A QUESTION ASSERTS A LONG-STANDING TREND STATEMENT, CHECK WHETHER THE TREND HAS CROSSED THE LINE

ONE LINE FOR THE INTERVIEW India has reached below-replacement fertility while its population continues to grow, which is not a contradiction but population momentum — and

it means the demographic dividend is already time-limited, so the policy question has shifted from restraining numbers to employing the cohort that has already been born.

ACTION · MODULE 4 IS COMPLETE

Five chapters, F4.1 to F4.5, covering **15.0 planning marks** — and written lean, as Blueprint §11.3 and register §4 both require.

Next: Module 10 — Integrated Current Affairs. It is **20.0 marks for 12 hours**, a better rate than this module, and it is the one module that **cannot be finished early by its nature** — which is why F10.1 is built as a collection system rather than as a set of facts to memorise.

Note how much of Module 4 already depended on it: the GST slabs, the new income tax statute, the Sixteenth Finance Commission, the base year revision, the fertility crossing, and the census now under way. **Six of this module's most likely questions are current affairs wearing an economics label.**
