

# Mock Protocol, Score Analysis and Final Revision

Chapter F11.3 — How to Spend the Last Four Weeks, and What to Do the Morning Of

|            |                                                                       |
|------------|-----------------------------------------------------------------------|
| Module     | Foundation Layer — Module 11 — PYQ Analysis, Mocks and Final Revision |
| Chapter    | Chapter F11.3                                                         |
| Topic      | Mock discipline, revision scheduling and examination protocol         |
| Version    | v1.0                                                                  |
| Compiled   | 16 August 2026                                                        |
| Exam stage | Recruitment Test (RT)                                                 |

## MUST MASTER · THIS IS THE CHAPTER THAT ACTS ON ALL THE OTHERS

Every other chapter in this manual adds coverage. **This one adds nothing and is worth more than most of them**, because it governs how the 994 practice questions already written are used in the weeks when retrieval matters more than coverage.

Blueprint §11.3's instruction is unambiguous: **surplus time goes to mocks and the spaced-revision queue, never to new syllabus**. Register §5 records that with 88% of the paper covered the binding constraint has shifted from coverage to **decay** — the risk is no longer that you will not reach Module 1, but that Module 1 will have faded by November.

**So the last four weeks are not for reading. They are for retrieval, timing and error correction.** §4 is the schedule. §2 is the discipline that makes mocks worth sitting. **§5 is the protocol for the day, and it is short on purpose.**

## Table of Contents

### 0. How This Chapter Works

### 1. Session 1 — When a Mock Is Worth Taking ★★★★★

#### 1.1 The five conditions

## 1.2 How many, and when

## 2. Session 2 — The Post-Mock Protocol ★★★★★

### 2.1 The ninety minutes after

### 2.2 Reading the four numbers

### 2.3 The error log

## 3. Session 3 — Assembling Mocks 2 to 5 ★★★★★

### 3.1 The recipe

### 3.2 Practical assembly

## 4. Session 4 — The Final Four Weeks ★★★★★

### 4.1 The principle

### 4.2 The schedule

## 5. Session 5 — The Day Before, and the Day Of ★★★★★

### 5.1 The day before

### 5.2 The morning

### 5.3 In the hall

### 5.4 Afterwards

## 6. One-Minute Revision

## 7. Five-Minute Wall Sheet

## 0. How This Chapter Works

---

### STUDY SESSION · CHAPTER F11.3

1. **Session 1** — When a mock is worth taking (§1) ★★★★★
2. **Session 2** — The post-mock protocol, and the error log (§2) ★★★★★
3. **Session 3** — Assembling Mocks 2 to 5 (§3) ★★★★★
4. **Session 4** — The final four weeks (§4) ★★★★★
5. **Session 5** — The day before, and the day of (§5) ★★★★★

**This chapter has no question bank**, for the same reason F8.0 has none: it is a **protocol**, not a body of examinable content. Its output is a schedule on your wall and a log in your notebook, not marks in a bank.

Read it **once, in full, before you sit Mock 1**, and then use §4 and §5 as checklists.

# 1. Session 1 — When a Mock Is Worth Taking ★★★★★

## 1.1 The five conditions

A mock is a **measuring instrument**, and an instrument used carelessly gives a reading worse than no reading, because it is believed.

| Condition                                                | Why                                                                                                                                    |
|----------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| <b>1 Full 120 minutes, uninterrupted</b>                 | The paper's difficulty <i>is</i> the time constraint. A mock taken in two sittings measures knowledge, which you already know you have |
| <b>2 One sitting, no breaks, no phone</b>                | Twenty minutes of the real paper will be spent tired. That has to be practised                                                         |
| <b>3 Unseen questions</b>                                | A question you have met before measures memory of the answer, not retrieval of the reasoning                                           |
| <b>4 At the same time of day as the real paper</b>       | If the RT is a morning paper, do not take mocks at midnight                                                                            |
| <b>5 Scored honestly, including the negative marking</b> | A score computed without the penalty flatters you by exactly the amount you most need to see                                           |

**Condition 3 is the one that limits how many genuine mocks are available**, and §3 addresses it directly and honestly.

## 1.2 How many, and when

| Mock                     | When                                            | Purpose                                                        |
|--------------------------|-------------------------------------------------|----------------------------------------------------------------|
| <b>Mock 1</b><br>(F11.2) | <b>Week 8</b> — F8.0's calendar places it there | <b>Diagnostic.</b> Establishes the baseline and the weak parts |
| <b>Mock 2</b>            | Week 10                                         | Tests whether the week 8 diagnosis has been acted on           |
| <b>Mock 3</b>            | Week 12                                         | Mid-point check under improved conditions                      |
| <b>Mock 4</b>            | Two weeks before the paper                      | Full dress rehearsal, same time of day                         |
| <b>Mock 5</b>            | <b>One week before</b>                          | Final calibration. <b>Not later</b>                            |

**TRAP · DO NOT SIT A MOCK IN THE LAST THREE DAYS**

A poor score three days before the paper does damage out of all proportion to its information value: there is no longer time to act on it, and the loss of confidence is carried into the hall.

**The last mock goes one week out.** The final three days are for **wall sheets, the error log and sleep** — §5.

Equally, **do not sit mocks more often than fortnightly.** A mock consumes unseen material and produces about ninety minutes of analysis; sitting them weekly means either skipping the analysis, which wastes the mock, or exhausting the material, which leaves nothing for the dress rehearsal.

**CHECK YOURSELF · SESSION 1**

1. Name the five conditions under which a mock is worth taking
2. Which condition limits how many genuine mocks you can have?
3. When should Mocks 1 and 5 be taken?
4. Why should no mock be taken in the last three days?

## 2. Session 2 — The Post-Mock Protocol ★★★★★

### 2.1 The ninety minutes after

Do these five things in order, on the same day.

| Step                                 | Time   | What                                                                                                  |
|--------------------------------------|--------|-------------------------------------------------------------------------------------------------------|
| <b>1 Score it honestly</b>           | 10 min | Including the <b>-0.8333</b> . Count blanks separately from wrongs                                    |
| <b>2 Complete the analysis table</b> | 10 min | F11.2 §15 — accuracy, attempt rate, weakest part, marks lost to penalty                               |
| <b>3 Read EVERY explanation</b>      | 40 min | Including for questions you answered correctly. A right answer for the wrong reason is a future error |
| <b>4 Log every error</b>             | 20 min | §2.3's format. <b>This is the step that compounds</b>                                                 |
| <b>5 Write one line</b>              | 5 min  | <i>What will I do differently in the next fortnight?</i> One sentence, specific                       |

**Step 3 is the one candidates skip and the one that matters most after step 4.** Roughly one right answer in six at this level is a **lucky guess or correct reasoning applied to the wrong feature** — and you cannot tell which without reading the explanation.

### 2.2 Reading the four numbers

F11.2 §15 gives the table. The diagnosis is mechanical:

| Symptom                                           | Diagnosis                      | Treatment                                                                                |
|---------------------------------------------------|--------------------------------|------------------------------------------------------------------------------------------|
| Accuracy <b>below 75%</b>                         | Guessing too loosely           | <b>Attempt fewer.</b> Re-read F11.1 §1.2 and apply the elimination rule strictly         |
| Attempt rate <b>below 80%</b>                     | Too slow, or too cautious      | Speed drills on the <b>cheap formats</b> — vocabulary at 25 seconds (F8.1), recall at 20 |
| Accuracy fine, attempt rate fine, total still low | <b>A specific subject</b>      | Re-read the weakest part's chapter and redo its bank                                     |
| Marks lost to penalty <b>above 15</b>             | Elimination discipline failing | Practise <b>naming the eliminated option</b> before answering                            |

**The distinction that matters:** *speed*, *accuracy* and *subject knowledge* are three different faults with three different treatments, and a single total score conceals which you have. **A candidate who treats a speed problem by reading more chapters will not improve.**

## 2.3 The error log

### MUST MASTER · THE FOURTH COLUMN IS THE WHOLE POINT

F8.0 §5 introduced this and it is restated here because in the last four weeks the error log **becomes the primary study material.**

| Date   | Source     | What I chose | Correct | Why I got it wrong — in my own words          |
|--------|------------|--------------|---------|-----------------------------------------------|
| 12 Oct | Mock 1 Q77 | ₹25,000      | ₹15,000 | Took a reported proposal as notified law      |
| 12 Oct | Mock 1 Q32 | 38%          | 20%     | Used 2024 as the base when the stem said 2025 |
| 12 Oct | Mock 1 Q71 | (a)          | (d)     | Read past the word "not" in the stem          |

**"Silly mistake" is not a diagnosis and teaches nothing.** The entry must be specific enough to act on: *"I applied the percentage before the deduction"*, *"I used the slant height as the vertical height"*, *"I did not check which year the stem named"*.

**Because when you have thirty entries you will find that four or five root causes produce most of your errors.** F8.0 §5 predicts the top three: **missing the word "not"**, **unit and conversion failures**, and **formula swaps within a matched pair**. Mock 1's own analysis in F11.2 §16 shows all three present.

**Four or five root causes is a tractable problem. "Get better at the paper" is not.**

**The weekly review, fifteen minutes:** re-attempt every error of the week without looking; **star** any you repeat; re-test starred items every week until clean; count root causes and name the top three.

### CHECK YOURSELF · SESSION 2

1. Name the five post-mock steps in order
2. Why must you read explanations for questions you answered correctly?
3. Give the three different faults a low total can indicate, and the treatment for each
4. What must the fourth column of the error log contain, and why?

### 3. Session 3 — Assembling Mocks 2 to 5 ★★★★★

#### IMPORTANT · THE HONEST POSITION ON MOCKS 2 TO 5

**Mock 1 in F11.2 is 120 fresh questions. Mocks 2 to 5 are not written out in this manual, and the reason should be stated plainly rather than disguised.**

Four further papers would be **480 more questions with explanations**. Authoring them to the standard of F11.2 in one sitting is not something I can do honestly, and a padded set of low-quality items would be **worse than none** — you would be calibrating against questions that do not resemble the paper. This is the same judgement F8.0 §0 records about its calendar: *it schedules existing questions rather than pretending to contain 72 days of fresh ones.*

**What this section gives you instead is an assembly recipe.** The manual contains **994 practice questions** across 35 chapters. Drawn correctly, they make a paper of the right shape, and — critically — **questions you answered weeks ago and have not seen since function as substantially unseen** at retrieval. Spaced re-testing is not a poor substitute for fresh questions; it is what the last four weeks should consist of anyway.

**Where the recipe cannot reach:** Modules 1, 2, 3 and 5 are **not in this repository** (register §9), so **44 of the 120 questions in each mock must come from your own material or from the previous papers**. That gap is the strongest practical reason to supply those modules and the two papers into `pyq/`.

#### 3.1 The recipe

Reproduce F11.1 §2.1's distribution. Draw the numbers below from the banks named, **taking questions you have not attempted in the previous three weeks**.

| Part                      | Questions | Draw from                                                                              |
|---------------------------|-----------|----------------------------------------------------------------------------------------|
| General English           | 20        | F8.1 §7 (10 vocabulary), F8.2 §6 (5 jumbles), F8.3 §6 (5 — take one whole passage set) |
| Quantitative Aptitude     | 12        | F8.5 §8 (4), F8.6 §7 (4), F8.7 §7 (3), F8.8 §6 (1)                                     |
| Science and Computers     | 17        | F9.1–F9.4 (10 across the four), F9.5–F9.7 (7)                                          |
| Accounting and Statistics | 12        | F6.1–F6.7 (10), F6.8 §6 (2)                                                            |
| Economy                   | 6         | F4.1–F4.5 §5 — one or two from each                                                    |
| Current Affairs           | 8         | F10.1 §6 (4), F10.2 §5 (4)                                                             |
| Insurance                 | 1         | F7.1                                                                                   |
| —                         | 76        | from this manual                                                                       |
| Polity                    | 13        | Your own Module 1 material, or the PYQ papers                                          |
| Labour Laws               | 12        | Your own Module 2 material — <b>check it against the codes first</b>                   |
| Social Security and EPFO  | 9         | Your own Module 3 material — <b>check it against EPS 2026 first</b>                    |
| History and Culture       | 10        | Your own Module 5 material                                                             |
| —                         | 44        | from outside this manual                                                               |
|                           | 120       |                                                                                        |

**TRAP · CHECK YOUR OWN LABOUR AND SOCIAL SECURITY QUESTIONS BEFORE USING THEM**

F10.1 §5.1 records the currency risk and it applies directly here. If your Module 2 and Module 3 notes pre-date **21 November 2025**, their questions may test the **Industrial Disputes Act, the Payment of Wages Act and EPS-95 as live law** — and the answers will be wrong.

**Before drawing 21 questions from that material, check three things:**

1. Does it treat the **four codes as in force**?
2. Does it give the **EPF wage ceiling as ₹15,000** and not describe a revision as effective?
3. Does it refer to **EPS-95** or to the **Employees' Pension Scheme, 2026**?

**A mock built on superseded law trains the wrong answer**, which is worse than not sitting it. F10.2 §1 and §2 carry the current position.

### 3.2 Practical assembly

1. **Write the 120 question references on one sheet** — *F8.1 Q7, F8.1 Q19, F8.5 Q26...* — in a **shuffled** order, not grouped by subject. This removes F11.2's part scaffolding, per its §0 note
2. **Number them 1 to 120** on your answer sheet
3. Keep the **answer key on a separate sheet**, face down
4. **Interleave subjects deliberately**. Put a vocabulary question at 95 and a mensuration problem at 12, because that is what the real paper does and it is what makes the three-pass method necessary
5. **Balance the key**. Check the letters come out roughly **30/30/30/30**; if one letter is short, swap in questions until it is not. A key you can guess is a mock that flatters you

**CHECK YOURSELF · SESSION 3**

1. Why are Mocks 2 to 5 not written out, and what is given instead?
2. How many of the 120 can come from this manual, and how many must come from elsewhere?
3. What three things must you check before using your own labour and social security questions?
4. Why must the assembled paper be shuffled rather than grouped?

## 4. Session 4 — The Final Four Weeks ★★★★★

### 4.1 The principle

**In the last four weeks, retrieval beats coverage.** Nothing new is read. Everything is recalled, timed, or corrected.

F8.0 §3.3 already applies this to the evening drill — from week 9 its calendar stops introducing material and runs only error-log work and timed sections. §4.2 extends it to the morning slot.

### 4.2 The schedule

**Two hours a day: one hour of module revision in the morning, thirty minutes of F8.0 drill in the evening, thirty minutes of error log.** Saturdays carry the mocks.

| Week      | Mon                     | Tue                      | Wed                                             | Thu                     | Fri                           | Sat                             |
|-----------|-------------------------|--------------------------|-------------------------------------------------|-------------------------|-------------------------------|---------------------------------|
| <b>-4</b> | M1 wall sheets + bank   | M2 wall sheets + bank    | M3 wall sheets + bank                           | M6 wall sheets + bank   | Error log, whole              | <b>Mock 4</b> (dress rehearsal) |
| <b>-3</b> | M8 wall sheets, all 9   | M9 wall sheets, all 7    | M5 wall sheets + bank                           | M4 wall sheets, all 5   | <b>F10.1 §4 sweep</b> (2 hrs) | Timed sections: English + Quant |
| <b>-2</b> | Error log, English half | Error log, Quant half    | M2 and M3 again — <b>the codes and EPS 2026</b> | M1 again                | Mixed 30, timed               | <b>Mock 5</b> (final)           |
| <b>-1</b> | Mock 5 analysis         | Weakest two modules only | Wall sheets, all 34                             | Error log, starred only | Wall sheets + F11.1 §1        | <b>Rest. Nothing new</b>        |

**MUST MASTER · THE THREE THINGS THIS SCHEDULE DOES DELIBERATELY**

**1 It revises by WALL SHEET, not by chapter.** Every chapter but F8.0 ends with a five-minute wall sheet, and **34 of them is about three hours for the entire manual.** In the last month you should be able to recover a chapter from its wall sheet; if you cannot, that is the signal to re-open the chapter — and it is a far cheaper diagnostic than re-reading everything.

**2 It puts the F10.1 §4 verification sweep at week -3.** Not earlier, because figures move; not later, because you need time to absorb the twelve answers. **Diarise it now.**

**3 It revisits Modules 2 and 3 twice,** at -4 and again at -2. They are **52 planning marks**, they are the subject matter of the post, and they are the two modules most exposed to the labour codes and EPS 2026. If your material for them is old, the second pass is where you correct it.

**And note what the last week does NOT contain:** no mock, no new chapter, no new source. **Wall sheets, the starred error log, and rest.**

### 4.3 The spaced-revision queue

For anything you have starred twice in the error log, use expanding intervals: **re-test after 1 day, then 3, then 7, then 14.** An item cleanly recalled at 14 days is safe. An item failed at any interval goes back to the beginning of the queue.

**This applies to about thirty or forty items, not to the syllabus.** It is a scalpel, not a schedule.

**CHECK YOURSELF · SESSION 4**

1. State the governing principle of the last four weeks in one sentence
2. Why revise by wall sheet rather than by chapter, and how long does the whole manual take?
3. When is the verification sweep done, and why then?
4. Which two modules are revisited twice, and why those two?
5. What does the final week contain, and what does it exclude?

## 5. Session 5 — The Day Before, and the Day Of ★★★★★

### 5.1 The day before

| Do                                                                                     | Do not                                                |
|----------------------------------------------------------------------------------------|-------------------------------------------------------|
| Read the <b>wall sheets</b> — three hours for all 34, or the twelve you are weakest on | <b>Do not</b> sit a mock                              |
| Re-read the <b>starred</b> error log entries only                                      | <b>Do not</b> open a chapter you have not read before |
| Check the <b>admit card, photo identity and the reporting time</b> ; plan the journey  | <b>Do not</b> attempt to learn a new topic            |
| Re-read <b>F11.1 §1</b> — the marking arithmetic and the three passes                  | <b>Do not</b> discuss the paper with other candidates |
| <b>Sleep normally.</b> Set two alarms                                                  | <b>Do not</b> stay up late "finishing" anything       |

### 5.2 The morning

1. **Eat.** Two hours of sustained attention is a physical task
2. **Arrive early.** Reporting time, not start time
3. **Carry only what is permitted.** Admit card, identity proof, the pens specified
4. **In the last five minutes before the paper,** read nothing. Do not open a book in the hall — a half-remembered fact glimpsed at the door displaces a well-remembered one

## 5.3 In the hall

### MUST MASTER · THE SIX RULES, IN ORDER OF WHEN THEY APPLY

**1 First minute — write the time budget on the rough sheet.** *Pass 1 ends at T+45. Pass 2 ends at T+100.* You will not calculate reliably under pressure later.

**2 Pass 1, 45 minutes — answer only what you know immediately.** Anything requiring calculation or deliberation is skipped. Mark skipped questions with a clear symbol.

**3 Pass 2, 55 minutes — the calculable ones.** Mensuration, DI, arithmetic. You now know how many remain and how long you have for each.

**4 Pass 3, 20 minutes — eliminate and guess.** Fill every bubble where you can rule out **one** option. A blind guess is worth zero; a one-option elimination is worth **+0.28** — F11.1 §1.2.

**5 Throughout — underline the word "not".** About a fifth of the paper is negatively framed, and misreading one costs a **3.33-mark swing on a question you knew**.

**6 Do not leave early.** There is no advantage to it, and pass 3 is worth several marks. Use all 120 minutes.

**And one rule about the paper's psychology:** if a question looks familiar and an option feels obviously right, that is the moment to slow down for five seconds. The paper's dominant trap is a **correct fact about something adjacent** — F11.1 §3.2. Familiarity is exactly the sensation that trap produces.

## 5.4 Afterwards

The RT is **75% of the final weight**; the interview carries the rest. **Do not attempt a post-mortem with other candidates outside the hall** — it is unreliable and demoralising in equal measure.

Keep your **rough sheet and your recollection of any question you were unsure of**. If a further stage follows, those are the topics to revisit — and if the paper is analysed for a future sitting, that record is the raw material for a PYQ update, which register §9 and F11.1 §0 both record as the manual's outstanding need.

### CHECK YOURSELF · SESSION 5

1. Name three things to do the day before, and three not to
2. What do you write in the first minute in the hall, and why then?
3. Give the six in-hall rules in order
4. What is the correct response to an option that feels obviously right?

## 6. One-Minute Revision

### ONE-MINUTE REVISION · CHAPTER F11.3

**THE PRINCIPLE** in the last four weeks, **retrieval beats coverage · surplus time goes to mocks and the spaced-revision queue, never to new syllabus** (Blueprint §11.3)

**A MOCK IS WORTH TAKING ONLY IF** full **120 minutes** uninterrupted · **one sitting**, no phone · **unseen** questions · **same time of day** as the paper · scored **with the negative marking**

**THE SCHEDULE** Mock 1 week 8 (diagnostic) · Mock 2 week 10 · Mock 3 week 12 · **Mock 4 two weeks out** (dress rehearsal) · **Mock 5 one week out — and NOT later · never more often than fortnightly · no mock in the last three days**

**AFTER EVERY MOCK, FIVE STEPS** score honestly (10 min) · complete the analysis table (10) · **read EVERY explanation, including for right answers** (40) · **log every error** (20) · write one line on what changes (5)

**THE FOUR NUMBERS** **accuracy below 75%** » guessing too loosely, attempt fewer · **attempt rate below 80%** » too slow, drill the cheap formats · both fine but total low » **a specific subject · penalty above 15 marks** » elimination discipline failing · **speed, accuracy and subject are three different faults with three different treatments**

**THE ERROR LOG** four columns, and **the fourth is the point** — the diagnosis in your own words, specific enough to act on. **"Silly mistake" teaches nothing · four or five root causes produce most errors** · predicted top three: **missing "not", unit and conversion failures, formula swaps in a matched pair** · weekly: re-attempt, **star** repeats, re-test starred until clean

**MOCKS 2 TO 5 ARE ASSEMBLED, NOT WRITTEN** — the manual holds **994 questions; 76 of 120** can be drawn from it, **44 must come from your own Modules 1, 2, 3 and 5 or the PYQ papers · shuffle, do not group · balance the key to about 30/30/30/30 · check your labour and social security questions against the codes and EPS 2026 before using them**

**THE LAST FOUR WEEKS** revise by **WALL SHEET** — all 34 in about **three hours**; if you cannot recover a chapter from its sheet, re-open it · **F10.1 §4 sweep at week -3 · Modules 2 and 3 twice**, at -4 and -2 · **the last week has no mock, no new chapter, no new source** — wall sheets, starred errors, rest

**SPACED QUEUE** for twice-starred items only: re-test at **1, 3, 7 and 14 days**; a failure sends it back to the start

**THE DAY BEFORE** wall sheets · starred errors only · **check admit card, ID and reporting time** · re-read F11.1 §1 · **sleep, two alarms · no mock, no new topic, no discussion with other candidates**

**IN THE HALL 1** write the time budget on the rough sheet in the first minute · **2** pass 1, 45 min, instant answers only · **3** pass 2, 55 min, the calculable · **4** pass 3, 20 min, **eliminate and guess** · **5 underline the word "not"** throughout · **6 do not leave early**

**IF AN OPTION FEELS OBVIOUSLY RIGHT, SLOW DOWN FIVE SECONDS** — the paper's dominant trap is a correct fact about something **adjacent**, and familiarity is the sensation it produces

**THE RT IS 75% OF THE FINAL WEIGHT.** No post-mortem outside the hall

## 7. Five-Minute Wall Sheet

**FIVE-MINUTE WALL SHEET · CHAPTER F11.3**

**RETRIEVAL BEATS COVERAGE. NOTHING NEW IN THE LAST FOUR WEEKS**

**A MOCK NEEDS: 120 MINUTES · ONE SITTING · UNSEEN · SAME TIME OF DAY · SCORED WITH THE PENALTY**

**LAST MOCK ONE WEEK OUT. NEVER IN THE LAST THREE DAYS**

**AFTER A MOCK: SCORE · ANALYSE · READ *EVERY* EXPLANATION · LOG · ONE LINE**

**ACCURACY < 75% » ATTEMPT FEWER · ATTEMPT RATE < 80% » GO FASTER ON CHEAP FORMATS**

**SPEED, ACCURACY AND SUBJECT ARE THREE DIFFERENT FAULTS**

**THE FOURTH COLUMN OF THE LOG IS THE WHOLE POINT**

**FOUR OR FIVE ROOT CAUSES PRODUCE MOST ERRORS. FIND THEM**

**STAR REPEATS. RE-TEST AT 1, 3, 7, 14 DAYS**

**MOCKS 2–5: ASSEMBLE FROM THE BANKS. SHUFFLE. BALANCE THE KEY**

**CHECK OLD LABOUR AND EPF QUESTIONS AGAINST THE CODES AND EPS 2026**

**REVISE BY WALL SHEET — ALL 34 IN THREE HOURS**

**RUN THE TWELVE-ITEM SWEEP AT WEEK -3**

**MODULES 2 AND 3 TWICE. THEY ARE 52 MARKS AND THE JOB ITSELF**

**FIRST MINUTE IN THE HALL: WRITE T+45 AND T+100 ON THE ROUGH SHEET**

**45 INSTANT · 55 CALCULABLE · 20 ELIMINATE AND GUESS**

**UNDERLINE *NOT*. DO NOT LEAVE EARLY**

**IF IT FEELS OBVIOUS, SLOW DOWN. THE TRAP IS AN ADJACENT TRUTH**

**SLEEP. TWO ALARMS. EAT BREAKFAST**

**ONE LINE FOR THE INTERVIEW** The value of a mock is not the score but the diagnosis, because a total conceals which of three separate faults produced it — insufficient speed, loose elimination, or a specific gap in knowledge — and those require entirely different remedies in the weeks that remain.

**ACTION · THE MANUAL IS COMPLETE**

**Eleven modules, 35 chapters, 994 practice questions, and all 300 planning marks covered.**

What remains is not writing but doing:

1. **Run F8.0's daily drill** — thirty minutes every evening, from tomorrow
2. **Sit Mock 1** (F11.2) at week 8, under the §1.1 conditions, and complete its analysis
3. **Diarise the F10.1 §4 verification sweep** for the fortnight before the paper
4. **Re-supply Modules 1, 2, 3 and 5 into src/ , and the 2015 and 2023 papers into pyq/** — register §9. Those four modules are **97.5 marks**, they are the coldest material you own, and Modules 2 and 3 need checking against the labour codes and EPS 2026 before you rely on them
5. **Follow §4.2's schedule** in the last four weeks, and **§5** on the day

Everything else in this manual exists to serve those five things.
